Sells with 50% interest in offsprings resulting from 6 transferred Sudden Express / Orange 51 embryos.** There are few bucks whose legacy is potent enough to change the course of the industry. Sudden Express is that kind of buck. His lasting impact is still providing opportunities for deer breeding programs across the country and this maternal asset hails from directly from his dam. Sutton is Triple Crown / Sudden Express' Dam. Is there a more proven cross out there? We crossed Orange 51 back to Sudden Express himself and we think its a stout recipe for power and poise. We are offering 50% INTEREST SUTTON along with 50% INTEREST in 6 potential OFFSPRING resulting from the 6 Sudden Express / Sutton transferred embryos. A unique opportunity!

Horsepower/Black 926 is a pedigree you can build a herd around. Traveller's blend of the most desirable antler traits with his pedigree and performance can generate donor caliber daughters and industry leading sons. We want to share the opportunity to be a part of his impact by offering 20% INTEREST in Traveller. We are excited to see where the partnership will take us and can't wait to see his production.

Cervid Solutions to Introduce "CS-1" Enhanced Deer and Elk Vaccine

Cervid Solutions, a leading provider of custom-made vaccines to the deer and elk farming industry for more than a decade, recently announced a significant update to its product portfolio. The company is transitioning its manufacturing to Vaxxinova, a renowned biotechnology firm, and introducing a new, combined vaccine product that merges the popular vaccines PV3 and EV1.

The new custom-vaccine, "CS-1", resulting from a collaboration with Vaxxinova, will leverage the proprietary Bio-One technology, a groundbreaking platform that harnesses the power of the host's immune system to generate a unique product line tailored to the Cervid industry. According to Vaxxinova, Bio-One technology enables the production of autogenous vaccines that are tailored to specific pathogens and immune profiles of each species, resulting in improved animal health and reduced risk of disease.

"By collaborating with Vaxxinova, we are able to bring our customers the most advanced vaccine technology available," said Josh Newton, Director of Operations at Cervid Solutions. "The combination of PV3 and EV1 into a single-dose vaccine product, 'CS-1', will provide unparalleled protection against disease, reduced animal stress from handling and provide our customers the confidence to prioritize the health and well-being of their herds."

Vaxxinova's Bio-One technology is designed to enhance the immune response in deer and elk, providing longer-lasting protection against disease. The new vaccine will be manufactured at Vaxxinova's state-of-the-art facilities, ensuring the highest standards of quality and purity.

Cervid Solutions will continue to offer PV3 and EV1 vaccines to its customers until the transition to Vaxxinova's production platform is complete. A seamless transition is anticipated, with minimal disruption to its customers and business operations.
